

Software

TxLink4 Lite Edition or RasterLink6Plus is bundled according to user's request.

Further evolved professional use Textile RIP software with new features

**TxLink™4
Lite**

Specifications

Unit

Item	TS55-1800
Print head	Head Assy Stagger layout
Print resolution	480 dpi, 600 dpi, 720 dpi, 1200 dpi
Maximum print width	1,940 mm (76.4 in)
Maximum media width	1,950 mm (76.8 in)
Rolled media weight	45 kg (99.2 lb)
Ink slot	8
Ink set	4c/6c/7c/8c
Ink	Type/Color Sb610 (Bl/Y/M/K/Lbl/Lm/Lk/Fy/Fp) Capacity 2L ink pack / 10kg ink tank
Safety standard	VCCI Class A / FCC Class A / CE Marking (EMC, Low voltage, Machinery directive, RoHS) CB Report / Energy Star / RCM / EAC
Interface	USB 2.0 Hi-speed, Ethernet 1000BASE-T
Power	Single phase AC 100–120 V/AC 200–240 V × 1
Power consumption	(AC 100 V) 1.44 kW (AC 200 V) 1.92 kW or less
Operational environment	Temperature: 20–30 degC (68–77 degF) Humidity: 35–65% Rh (Non condensing)
Outside dimensions (W × D × H)	3,240 × 713 × 1,857 mm (127.6 × 28.1 × 73.1 in)
Weight	202 kg (445.3 lb)

Water-based sublimation transfer inkjet printer

TS55-1800

The evolution
of production printing

TS55-1800

The "TS55-1800" is a revolutionary sublimation transfer inkjet printer for apparel/textile achieving high-speed printout of up to 135 sqm/h (1,453 sq.ft/h), superior functionality and convenient options suited for stable, long-term printout sessions at reduced cost.

Options aiming for cost reduction

Mini-jumbo roll unit corresponding to high-speed, high-volume demands

This is a feeding unit to load the "Mimaki Vision Jet-X" transfer paper with a length of about 2,500 m (8,202 ft). It reduces the cost per square meter and shortens the downtime due to media replacement, when compared with the case using the previous 150 m (492 ft)-long transfer paper.

The mini-jumbo roll, "Mimaki Vision Jet-X" featuring approximately 2,500m (8,202 ft/h) of transfer paper is announced concurrently with model "TS55-1800". Previously using a transfer paper roll of 150m (492 ft) length to print at the maximum print speed (135 sqm/h; 1,453 sq.ft/h) of "TS55-1800", it was incapable to have a continuous printing like all-night operation without operators due to necessity of their paper replacing work. However the combination of the mini-jumbo roll, "Mimaki Vision Jet-X" and "TS55-1800" allows for extended printout sessions unattended. The mini jumbo roll also contributes to reducing the running cost of printer systems with lower per-square meter unit price in comparison to smaller rolls.

Extended heater supporting stable operation

The extended heater attached to the lower portion of the standard heater facilitates the drying of high-speed printing results.

10kg ink supply unit corresponding to extended successive printing jobs

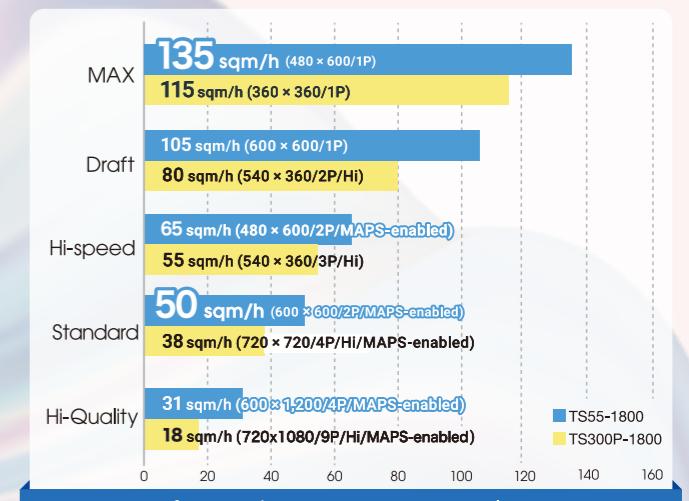

Equipment of the large quantity of 10kg (22 lb) ink tank enables long-term successive operations such as over-night printout sessions. The tank achieves significant reductions in running cost and operation time over the standard 2 liter pack cartridges.

Providing for high productivity

Maximum printout speed mode 135 sqm/h (1,453 sq.ft/h) /Standard quality mode 50 sqm/h (538 sq.ft/h)

Adoption of the newly developed print heads ensures high-quality print even at a high speeds, achieving 130% productivity over our conventional model (TS300P-1800) with standard quality mode printing at 50 sqm/h (538 sq.ft/h). By newly enabling the use of "MAPS" function in high-speed mode (65sqm/h; 699 sq.ft/h) printing, TS55-1800 achieves excellent image quality even with high speed printing.

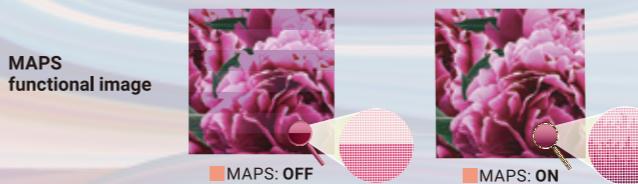

*Comparative printout speed

Technologies for uninterrupted reliable printing operations

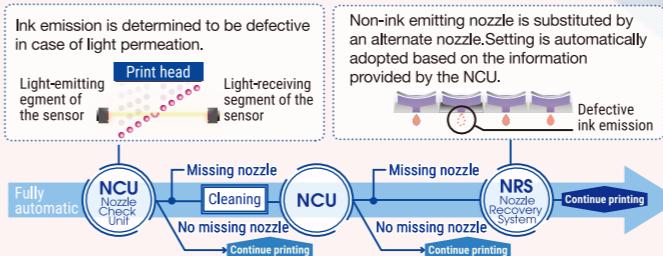

"MAPS" functionality reduces banding

In ordinary textile printers, the straight pass boundaries often results in bandings and discoloration due to slight misalignment. The "MAPS" (Mimaki Advanced Pass System) functionality provides gradation to printed pass boundaries and maintains stable print quality by reducing banding and uneven color.

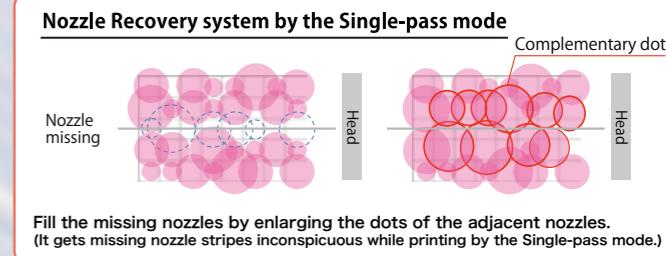

Minimization of NCU/NRS downtime

Incorporates Mimaki's unique automatic nozzle check unit ("NCU"). When the NCU detects a missing nozzle, it automatically performs cleaning to solve the problem. If the missing nozzle remains unresolved after cleaning, printing is commenced upon switching to an alternate nozzle. The print can be restarted to maintain productivity, without the need to wait for a service representative. The NRS is applied to the 1 Pass print mode, too. Even the max. print mode is very practical for the production.

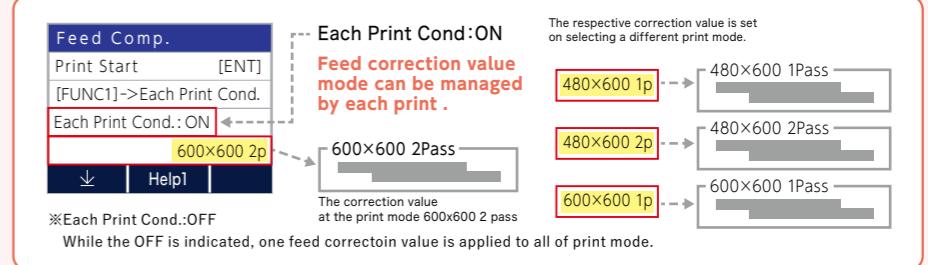

Nozzle Recovery system by the Single-pass mode (Patent-pending)

More user-friendliness !

Feed correction function by print mode

Different feed correction values can be applied to each print mode. Feed correction value for each print mode can be managed by machine setting. It is not necessary to perform feed confirmation for every mode and reduces the work of operator.

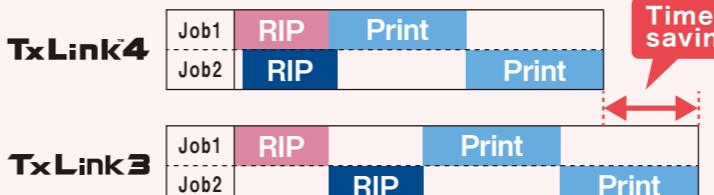

Guaranteed beauty

Sophisticated Textile RIP software, "TexLink4 Lite Edition"

Parallel RIP function to improve production efficiency

The parallel RIP function is useful for multiple print job data. RIP processing of multiple jobs can be performed in parallel, resulting in a significant reduction in work time. Up to 8 jobs can be processed in parallel.

16-bit rendering achieves beautiful gradation expression
